

a Vehicle improvement
Fold3 | $\Delta(G-C - NG-C) = -0.7335$ m

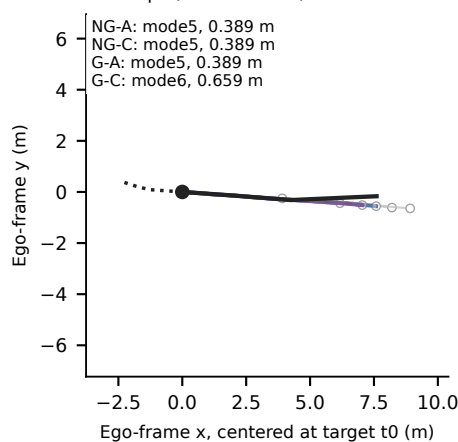

b Vehicle failure
Fold3 | $\Delta(G-C - NG-C) = +0.2036$ m

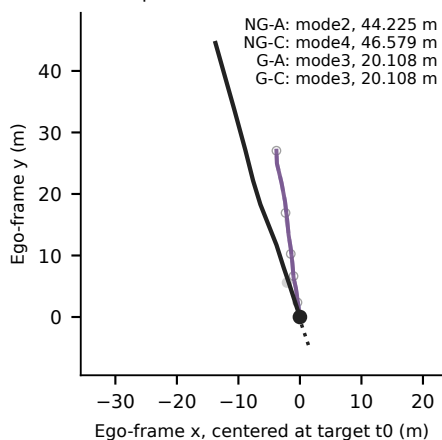

c Pedestrian improvement
Fold1 | $\Delta(G-C - NG-C) = -0.2999$ m

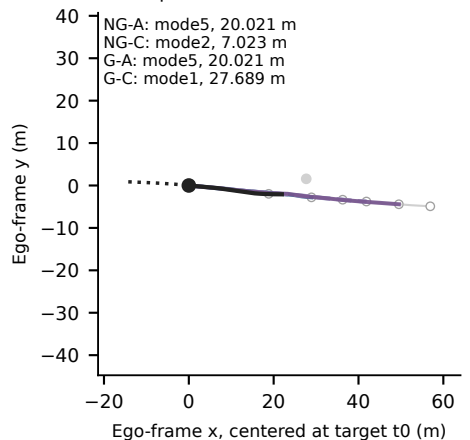

d Pedestrian failure
Fold2 | $\Delta(G-C - NG-C) = +0.2698$ m

e MovingVehicle large improvement
Fold3 | $\Delta(G-C - NG-C) = -26.4703$ m

f MovingVehicle high-cost failure
Fold3 | $\Delta(G-C - NG-C) = +20.6655$ m

NG-A NG-C GT (evaluation only) All six frozen candidates
G-A G-C Observed history

nuScenes HeadTrain630 | 3-fold internal ranking OOF | $n=260,151$; 6 displayed actor cases

Representative median-direction cases plus moving-vehicle extremes, selected after freezing; examples do not establish aggregate evidence.

5 observed / 12 future frames; positions and FDE in m. Same frozen six candidates for every model.

Frozen predictor trained on overlapping scenes; not an independent official test.
